

Make a star from 5 straws and a piece of string!

- Cut a piece of string or twine long enough to fit the 5 straw pieces, plus about 5 to 6 inches extra.
- String the straw pieces onto the twine. Leave an equal amount of extra twine on each side.

Arrange the straws into a pentagon shape. Tie the two ends of the twine together in a double knot next to the straw ends.

Tie it tight enough to hold its shape, but not so tight you can't move the straws around.

Bring the bottom straw over to the left. Pull the left side under to the right at the same time. You should have an upside-down triangle at the top and a kite shape at the bottom.

Fold the bottom 2 straws up so the point is at the top.

Push the point under the top straight edge.

Adjust the straws, sliding them around until the points are even.

Tie the ends of the twine together in a knot to create an ornament hanger. Cut any excess twine above the knot.

Your paper straw star is complete!
